“The aim of the project is to consolidate the square as a democratic, and plural green lung. ”

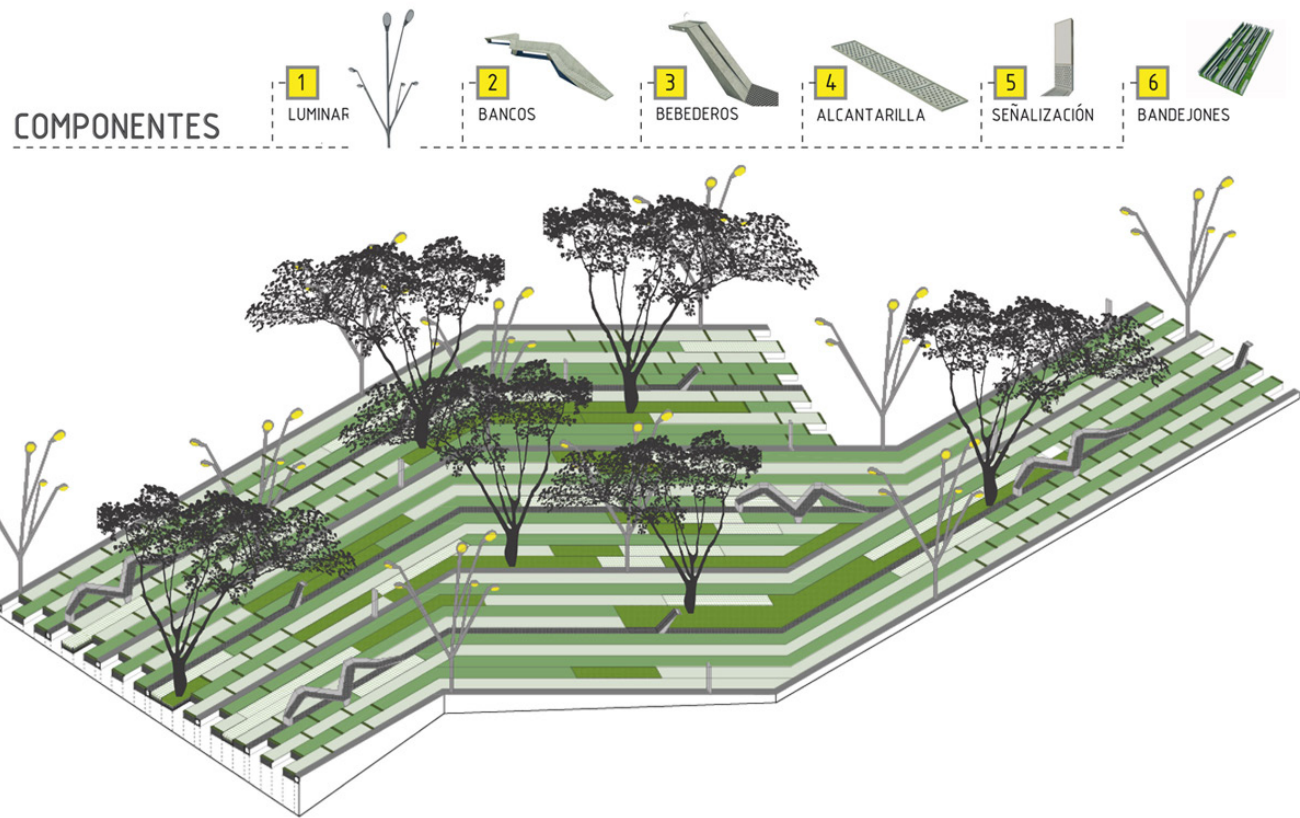

Plaza Jardín is an intervention to the existent Plaza Bolívar del Valle, in Caracas. The aim of the project is to consolidate the square as a democratic, and plural green lung. The Project involves two different scales; the urban scale, which consists in the reparations made to the old Bolivar Square and the architecture scale. The re-engineering plan improved the zone in an environmental,

communitarian, technological and inheritance aspects towards the area. The remodeling includes a drainage system, lightening, benches, and drinking fountains. The design also includes the landscaping, and it was based in the insertion of native plant species. The architecture scale consists in the design of a public library and will be part of the second phase of the square.

The project is an initiative from the Bureau of infrastructure of the parish, the projects was presented to the public assembly in 2009, and included the proposals and expectations of the local people. The LAB. PRO. FAB design joins the remodeling proposal of the Community, and 90% of the workers involved where from the local area.
