“It is has been the biggest remodeling of Quinta Normal Park in the last 80 years.”

The project is an intervention to an pre-existing park that looks to pay attention in three teams that today are the center of the urban preoccupation. The impulse to the development of public spaces, the conservation of the patrimony, and the attention to the sustainability of green areas.

Based on these three concerns the project looks to give the right value to the historic aspects, the landscape, and the architecture and urbanism

The general plan, and strategy is organized by three strategies. The expansion, conservation, and development of the area.
